

HR Data Analysis

Employee Attrition and Retention Analysis (Workforce Insights)

SQL + Power BI | Data-Driven HR Analytics

Problem Statement

Organizations often face challenges with high employee attrition, leading to increased recruitment costs, reduced productivity, and workforce instability. This project aims to help HR departments analyze employee data using SQL, Power BI, and Power Query to identify the key factors influencing employee turnover, such as salary, job role, experience, education field, and demographics. Through interactive dashboards and analytical insights, the solution supports data-driven HR decision-making for improving employee retention, workforce planning, and overall organizational performance.

Business Impact (HR-Focused & Actionable)

- Which employee groups are most likely to leave?
- Which factors combined drive early attrition?
- Where should retention budgets be prioritized?
- How can we identify at-risk employees before they resign?
- What role do promotion cycles play in turnover?

Attrition rate by Gender

```
1  -- Attrition rate by Gender
2  •  SELECT
3      Gender,
4      COUNT(*) AS Total_Employees,
5      SUM(CASE WHEN Attrition = 'Yes' THEN 1 ELSE 0 END) AS Attrition_Count,
6      ROUND(100.0 * SUM(CASE WHEN Attrition = 'Yes' THEN 1 ELSE 0 END) / COUNT(*), 2) AS Attrition_Rate_Pct
7  FROM hr_analytics
8  GROUP BY Gender;
```

Result Grid | | Filter Rows: | Export: | Wrap Cell Content:

	Gender	Total_Employees	Attrition_Count	Attrition_Rate_Pct
1	Male	849	145	17.08
2	Female	567	84	14.81

Attrition by Over Time

```
1  -- Attrition by Over Time
2  •  select
3      OverTime,
4          COUNT(*) AS Total,
5          SUM(CASE WHEN Attrition = 'Yes' THEN 1 ELSE 0 END) AS Attrited,
6          ROUND(100.0 * SUM(CASE WHEN Attrition = 'Yes' THEN 1 ELSE 0 END) / COUNT(*), 2) AS Attrition_Rate
7  FROM hr_analytics
8  GROUP BY OverTime;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

OverTime	Total	Attrited	Attrition_Rate
No	1011	104	10.29
Yes	405	125	30.86

Department-wise attrition rate with ranking

```

Conclusion

The Employee Attrition and Retention Analysis project was developed to help HR teams identify the key reasons behind employee turnover and improve workforce retention. Using SQL, Power BI, and Power Query, workforce data was analyzed through business-driven SQL queries and interactive dashboards to uncover insights related to overtime, job role, experience, and employee satisfaction. The project supports data-driven HR decision-making by helping organizations reduce attrition, improve employee satisfaction, and optimize workforce planning.

Key HR Takeaways for Retention Strategy

- Sales & HR are crisis zones: They have the highest attrition rates (20.74% and 19.35%).
- Low satisfaction is a dealbreaker: Attrition rate jumps to 22.55% when job satisfaction is level 1.
- Pay is a baseline, not a solution: Most attrition happens in the lowest salary band.
- Watch your high-performers: Top talent is leaving due to low raises and lack of promotion.
- Overtime burns out critical roles: Especially high impact for Lab Technicians and Sales Executives.
- Stagnation predicts exit: If no promotion in 3+ years, attrition risk spikes.
- Target retention spend: Focus budget only on high performers, not all attrition.
- Flag men in specific roles: Male attrition count is higher and driven by specific jobs (Lab Tech, Sales).
